

# Data Migration Services

Managed by our expert engineers to meet your business requirements.

Park Place Technologies' expert-level storage migration services enable businesses to quickly capitalize on their new hardware investments. Our team of expert-level engineers apply a phased methodology to understand the requirements and goals for each data migration project. Each project is kicked off via a simple questionnaire and a detailed assessment of the storage environment to determine the project scope, cost and best toolset to meet the businesses' requirements.

## Methodology

- **DISCOVERY, ANALYSIS & DESIGN:** A Park Place Technologies project manager will schedule a project kickoff. This meeting begins the process of aligning the migration work effort with your business requirements and expectations.
- **TECHNICAL PLANNING:** The Park Place Technologies data migration team will plan the end-to-end data migration work effort detailing the project's tasks, phases, and deliverables, one of which is the technical implementation plan. The plan is aligned to the needs of your business and its schedule.
- **IMPLEMENTATION:** Once you approve the technical plan, Park Place Technologies' data migration team will work to stage the environment to help facilitate a successful transition to your new storage infrastructure.
- **CUSTOMER ACCEPTANCE:** The project lifecycle includes timelines for acceptance testing and customer signoff of migration plan prior to full scale deployment.
- **CUTOVER:** Cutover events are scheduled to align to business operations so they conform with standard maintenance windows and processes.
- **KNOWLEDGE TRANSFER:** Post-implementation, the Park Place Technologies data migration team will review the implementation collateral.
- **PROJECT CLOSEOUT:** A Park Place Technologies project manager will conduct a post implementation review to confirm that all project deliverables were completed as planned.

## Migration Offerings

- **BLOCK STORAGE**
  - **FILE / UNSTRUCTURED DATA**
  - **HOST BASED**
  - **VIRTUAL**
  - **SAN FABRIC NETWORKING (ANALYSIS, DESIGN AND UPGRADES)**
- 
- Park Place Technologies' data migration team provides the services and solutions needed to achieve business objectives
  - Park Place Technologies' data migration team will perform simple assessment and identify best toolset for the migration
  - Selected toolset provided by Park Place Technologies as part of the migration package

## PARK PLACE TECHNOLOGIES: DATA CENTER AND NETWORKING OPTIMIZATION

As a global data center and networking optimization firm, Park Place Technologies streamlines infrastructure monitoring and management, creates cost efficiencies, reduces chaos, and enables faster mean-time-to-resolution. We do it through our unique and fully integrated DMSO (Discover, Monitor, Support, Optimize) approach and a robust portfolio of services and products including global hardware maintenance, professional services, a full suite of infrastructure managed services, best in class infrastructure monitoring software, and hardware sales.
