PARK PLACE
PROFESSIONAL SERVICES™

IT Relocation Services

Physical relocation of IT assets locally, nationally, and globally.

From small server moves, to moving thousands of data center assets globally, Park Place Technologies has been relocating IT assets for over 10 years. Our team of relocation experts are experienced with the nuances of physically moving data center hardware knowing how to identify and avoid potential risks. When it comes to deinstallation and reinstallation of assets, we use our Field Engineers, who work in data centers every day and are experienced with handling critical systems. Why trust your relocation to a general-purpose moving company?

Park Place Technologies provides turn-key solutions including:

- **Green-light to green-light guarantee.** Park Place will repair or replace hardware which was green light verified prior to shut down that cannot be green light verified after the move.
- Skilled Field Engineers to de-install, re-install, and power-on physical data center devices
- Professional electronics packers to ensure no physical damage to your equipment. Dedicated GPS tracked, air-ride climate-controlled transport, with two drivers to ensure chain of custody and data security.
- Custom developed quality control tool for cable/port mapping validation. Identifies duplicate port mapping errors prior to relocating assets and generates a report for verifying cable mapping during re-installation.
- Dedicated project management by a qualified Relocation PM/Specialist to assist with relocation planning and oversight of the migration process.

Customer Need/Pain Point

- Data center consolidation post mergers & acquisitions
- Lease or colocation contract expiration
- Closing offices or data centers
- Lack IT staff with relocation experience or no IT resource capacity
- Multiple vendor management

Optional Features

FEATURE	DESCRIPTION
Auto Discovery	Leverage our ParkView Discovery™ (PVD) to automate and simplify your asset discovery process which allows for detailed relocation planning. PVD also has native DCIM capabilities to model data center room layouts, auto-generate rack diagrams and visualize patch panel connections.
Move Group Planning	Our team of relocation experts help with reviewing system dependencies to develop a migration strategy that minimizes down-time and risks.
Site Audit	Park Place's team of field engineers can quickly conduct a site audit of your existing infrastructure to capture key data that enables informed decision making.
Cable/Port Mapping	Onsite cable tracing to create detailed cable and port mapping matrix, that is quality checked by our custom developed tool to ensure accuracy.
Asset Tagging & Cable Labelling	Tag and label assets and cables prior to or after the relocation event.
Asset Disposal	For hardware assets being retired as part of your relocation, Park Place's IT Asset Disposition services can provide onsite data erasure or drive destruction, asset recycling, or we can resell assets that have value

Why you can trust Park Place Technologies with your IT asset relocation assignment:

- We use only qualified field engineers and technicians to move equipment
- Asset relocations include all types of IT infrastructure from small servers and network devices to large storage arrays and mainframes.
- Spare parts available locally in the event of a hardware failure
- Manufacturer coordination if needed
- Experience in transporting equipment via dedicated direct, climate-controlled, air-ride truck, LTL, commercial air, chartered air, and sea. All transit insurance up to $3.0m per vehicle.
- Capability to provide asset swap equipment (aka "swing gear")
- Mature, standardized relocation tools and templates - draws consistent results
- 10+ years of experience specializing in reducing risk while operating efficiently in business-critical environments with minimal impact to your IT infrastructure
- Manufacturer independence provides clients with vendor agnostic solutions
- Flexible service model provides numerous options for delivery and cost control
- Global reach with our 400+ field engineers technicians experienced in physical hardware support

PARK PLACE
TECHNOLOGIES

Since 1991, Park Place Technologies has simplified the management of complex hybrid IT environments to maximize Uptime, improve operational speed, eliminate chaos and accelerate business transformation.

Park Place Technologies provides exceptional global service and support for data center storage, server and network hardware for all tier one OEM equipment. Park Place supports 110,000+ data centers in 154+ countries for more than 21,000 clients. Our worldwide network of 1,158,000+ parts stored regionally, locally and on-site, allows for fast parts distribution and service to help drive Uptime.
