Optimizing Network Hardware Support Starts with a ClearView™ Assessment

Network support costs can take a healthy bite out of your annual IT budget. Park Place Technologies' proprietary software based ClearView™ contract analyzer provides an objective recommendation on how to optimize network hardware support down to the device level.

The result? Reduced maintenance costs. Minimized risks and disruption with no compromise in service levels.

THE CLEARVIEW™ ASSESSMENT PROCESS
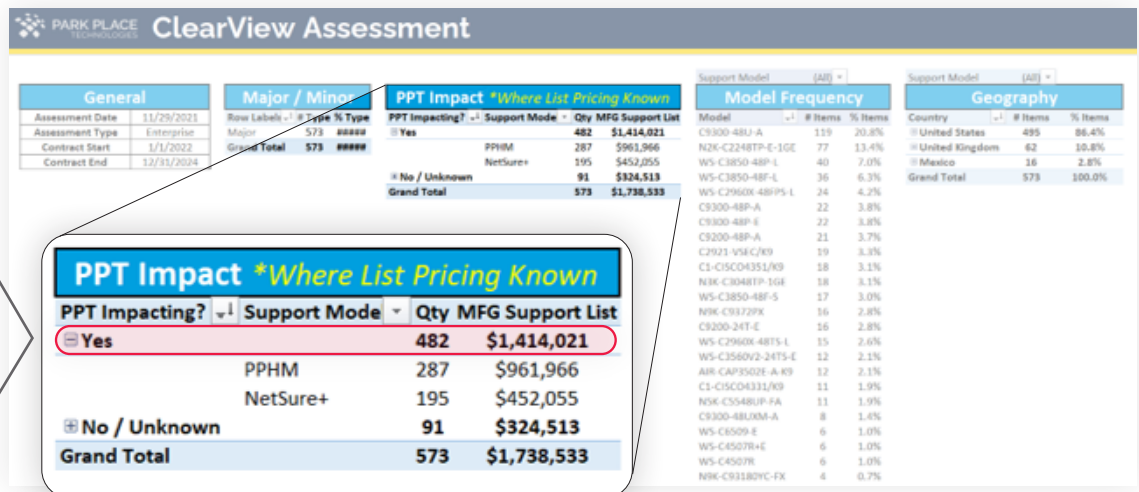

1. Simply send us a list of your network assets

2. We'll match the list against millions of relevant data points considering each device's operational impact, role in the customer experience, place in the workflow, compliance issues, associated risks, as well as the cost and options for support

3. Within two business days, we provide an impartial recommendation on the optimal mix of support including:
   - The devices that should stay on manufacturer support
   - Those that we recommended moving to Park Place Hardware Maintenance™
   - The equipment that is a good match for our NetSure+ service that combines support with third-party logistics

Most importantly, the assessment will identify the share of your current network support costs that Park Place can help you economize up to 30-40%.

Our philosophy with ClearView™ is total transparency. We deliver a recommendation for a hybrid strategy that balances varying levels of support with quantifiable savings.
