

Case Study

PROFESSIONAL SERVICES

Manufacturing company deployment needs met seamlessly by Professional Services

Customer Challenge:

A global manufacturer of specialty ingredients faced a significant challenge in configuring and supporting their NetApp filers and Cisco Nexus switches across multiple data centers. The project required the deployment of block storage connectivity, involving complex cabling, zoning, and connectivity validation. Ensuring the stability and efficiency of this setup was critical for the company to maintain seamless data operations and high availability.

Our Solution:

To address these challenges, Park Place provided a comprehensive solution that included both remote and onsite engineering support for the installation of NetApp and Cisco switch equipment. This dual approach ensured that expert guidance and hands-on assistance were available throughout the process, facilitating a smooth installation and configuration. A key aspect of the solution was network optimization. "Park Place designed and implemented block storage connectivity that allowed for seamless data flow between the multiple data centers," said Taylor Barnes, Park Place VP of Solutions Sales. "This design was crucial in ensuring that data could be accessed and transferred efficiently, without any bottlenecks or interruptions."

Park Place also adhered to NetApp best practices to ensure that the configurations were stable, redundant, and highly available. This included meticulous attention to detail in cabling, zoning, and connectivity validation, ensuring that all components worked together harmoniously. By following these best practices, Park Place was able to deliver a robust and reliable storage deployment that met the customer's needs.

Results and Impact:

Park Place's comprehensive setup, network optimization, and adherence to best practices enabled this manufacturing company to overcome their initial challenges. The project was completed successfully, providing a stable, redundant, and high-availability infrastructure that supports their critical data operations.

Smooth, Efficient Transition

Park Place Technologies is unique and so are your IT infrastructure needs. You need a partner who can offer custom IT services to optimize your company's IT strategy. Park Place's unparalleled service options for supporting and managing server, storage and network IT infrastructure enable IT teams to scale and resource their organizations effectively.

ORGANIZATION

INDUSTRY: Manufacturing

HEADQUARTERS: Wisconsin
